

Trimble BX992

Dual antenna receiver with integrated inertial navigation system and MSS band demodulator

GNSS and inertial tight integration

Taking advantage of Trimble's expertise in both GNSS and inertial technology the Trimble® BX992 module has been designed for applications requiring continuous centimeter accuracy in a compact package. By integrating inertial sensors on the same module, robust high accuracy positions and orientations are produced in all environments.

Trimble Maxwell 7 technology

The Trimble BX992 supports triple frequency for the GPS, GLONASS, BeiDou and Galileo constellations. As the number of satellites in the constellations grows the BX992 is ready to take advantage of the additional signals. This delivers the quickest and most reliable RTK initializations for centimeter positioning. For applications that do not require centimeter accuracy the BX992 integrated GNSS-inertial engine also delivers high accuracy GNSS, DGNSS positions in the most challenging environments such as urban canyons. With the latest Trimble Maxwell™ 7 Technology, the BX992 provides:

- 2 x 336 Tracking Channels
- Trimble EVEREST™ Plus multipath mitigation
- Advanced RF Spectrum monitoring and analysis
- Proven low-elevation tracking technology

With the option of utilizing OmniSTAR® or Trimble RTX services, the BX992 delivers varying levels of performance down to centimeter-level without the use of a base station.

Robust centimeter accurate solutions

The Trimble BX992 integrates the latest in precision inertial sensors in a compact package. With the BX992 you are buying a robust navigation solution, not just a GNSS receiver.

Trimble ProPoint engine

The Trimble BX992 is now available with the ProPoint® Engine. For optimal performance in GNSS degraded conditions the ProPoint Engine delivers premium accuracy, availability and integrity for your application.
